

New High-Grade Gold Zones within Fingals Open Pit - Kal East

Black Cat Syndicate Limited ("Black Cat" or "the Company") is pleased to provide an update on activities at the 100% owned Kal East Gold Operation ("Kal East").

HIGHLIGHTS

- The large Fingals open pit ("Fingals") is one of the long-term feed sources at Kal East and remains open in all directions and at depth. Mine life at Fingals is only constrained by drilling and an initial underground operation has already been outlined after completion of open pit mining.
- A recent grade control program (167 holes, 8,960m) within Fingals has identified multiple high-grade zones outside the existing Resource but within the open pit, including:
 - 5m @ 10.20g/t Au from 23m (FFGC_395_939)
 - 11m @ 3.87g/t Au from 39m (FFGC_395_934)
 - 3m @ 12.50g/t Au from 39m (FFGC_395_891)
 - 2m @ 13.60g/t Au from 28m (FFGC_395_795)
 - 9m @ 2.63g/t Au from 17m (FFGC_395_820)
 - 5m @ 8.90g/t Au from 27m (FFGC_395_844)
 - 14m @ 2.70g/t Au from 39m (FFGC_395_936)
 - 2m @ 17.40g/t Au from 27m (FFGC_395_871)
 - 5m @ 4.95g/t Au from 10m (FFGC_395_940)
- Mining at Fingals is accelerating with first Ore to be fed into the Lakewood processing facility ("Lakewood") in March 2026.
- Mining at the Majestic underground is also progressing well with first Ore drives accessed and in development. Grade control and extensional drilling will commence during the March 2026 quarter.

Figure 1: Looking southeast over the mining operations at the long life Fingals open pit.

Black Cat's Managing Director, Gareth Solly, said:

"These Fingals drilling results emphasise the long-term potential of both the open pit and future underground mine. The high-grade results have already identified bonus ounces within the planned open pit with the potential for additional mineralisation from follow up drilling. Mining activities at Fingals and Majestic are progressing well with the operations on track to provide all Ore to Lakewood from late March 2026 onwards.

The study to expand Lakewood from 1.2mtpa to 1.5mtpa is also progressing to plan, as part of our more gold sooner strategy.

Importantly, these developments and expansions will continue to be funded entirely from operating cashflow, highlighting the strength of Black Cat's operations and balance sheet."

New High-Grade Gold Zones within Fingals Open Pit - Kal East

FINGALS

Fingals currently has a Probable open pit Ore Reserve of 2,039kt @ 1.7g/t Au for 113koz (at A\$2,500/oz gold price¹). Fingals remains open in all directions and at depth with mine life only constrained by drilling and an initial underground operation has already been outlined after completion of open pit mining.

A recent grade control program (167 RC holes, 8,960m) targeted areas of wider spaced drilling within the open pit design. Results confirm the presence of high-grade gold outside of the current Resource but within the open pit and include:

- **5m @ 10.20g/t Au** from 23m (FFGC_395_939)
- **11m @ 3.87g/t Au** from 39m (FFGC_395_934)
- **3m @ 12.50g/t Au** from 39m (FFGC_395_891)
- **2m @ 13.60g/t Au** from 28m (FFGC_395_795)
- **9m @ 2.63g/t Au** from 17m (FFGC_395_820)
- **5m @ 8.90g/t Au** from 27m (FFGC_395_844)
- **14m @ 2.70g/t Au** from 39m (FFGC_395_936)
- **2m @ 17.40g/t Au** from 27m (FFGC_395_871)
- **5m @ 4.95g/t Au** from 10m (FFGC_395_940)

These results further reinforce Fingals as a long-term feed source at Kal East and support previously announced grade control² results, including:

- **11m @ 13.07g/t Au** from 55m (25FFGC_395_665)
- **5m @ 17.25g/t Au** from 25m (25FFGC395_082)
- **5m @ 11.98g/t Au** from 38m (25FFGC_395_526)
- **5m @ 11.36g/t Au** from 26m (25FFGC_395_016)
- **2m @ 28.4g/t Au** from 25m (25FFGC_395_688)
- **5m @ 27.84g/t Au** from 14m (FFGC_395_159)
- **4m @ 22.73g/t Au** from 10m (FFGC_395_163)
- **3m @ 22.30g/t Au** from 26m (FFGC_395_197)
- **3m @ 11.75g/t Au** from 35m (FFGC_395_507)

These latest results will be incorporated into an updated production model and will guide future drilling in the March 2026 quarter.

The ramp up of mining at Fingals is progressing well with first Ore processing at Lakewood to commence in March 2026.

New High-Grade Gold Zones within Fingals Open Pit - Kal East

MAJESTIC

Majestic currently has an underground Ore Reserve of 437kt @ 3.6g/t Au for 50koz¹ that remains open at depth. Ore development has commenced with tonnes and grades in line with expectation. Face grades to date include:

- **5.0m @ 5.29g/t Au** (MAJ_1218_OD1_Face 01) (Refer Figure 5)
- **4.7m @ 1.41g/t Au** (MAJ_1218_OD1_Face 02)
- **4.2m @ 7.01g/t Au** (MAJ_1218_OD1_Face 03)
- **4.6m @ 7.22g/t Au** (MAJ_1218_OD1_Face 04)
- **4.8m @ 3.66g/t Au** (MAJ_1218_OD1_Face 05)

Decline development is also progressing well with further ore drives to be accessed during the March 2026 quarter. Stoping will begin early in the June 2026 quarter, with production expected to ramp up to ~30,000tpm.

An underground diamond rig will commence in the March 2026 quarter conducting grade control and extensional drilling.

New High-Grade Gold Zones within Fingals Open Pit - Kal East

ABOUT BLACK CAT SYNDICATE (ASX: BC8)

Black Cat is a gold producer with operating mines and processing facilities at two of its three 100% owned operations.

Gold production occurs at:

Kal East: comprising ~650km² of highly prospective ground to the east of the world class mining centre of Kalgoorlie, WA. Kal East contains a Resource of 18.8Mt @ 2.1g/t Au for 1,294koz, including a preliminary JORC 2012 Reserve of 3.7Mt @ 2.0 g/t Au for 243koz. A turn-key funding, development & processing arrangement to mine and mill the Myhree and Boundary open pit deposits is underway³. Black Cat 100% owns and operates the 1.2Mtpa Lakewood gold processing facility, located ~6km east of Kalgoorlie.

Paulsens: comprising ~3,200km² of tenure located ~180km west of Paraburdoo in WA. Paulsens is an operational underground mine, with a 450ktpa processing facility, 128-person camp and other related infrastructure. Gold production restarted in December 2024 and will move to full production during 2025. Paulsens has a regional Resource of 4.3Mt @ 4.0g/t Au for 548koz and significant exploration and growth potential.

The Company has significant regional exploration potential at both Paulsens and Kal East. In addition, the Company also has two major organic growth projects at:

Coyote: comprising 1,050km² prospective tenements located in Northern Australia, ~20km on the WA side of the WA/NT border, on the Tanami Highway. Coyote has substantial infrastructure including an airstrip, underground mine, 300ktpa processing facility, +180-person camp and other related infrastructure. The operation has a Resource of 3.7Mt @ 5.5g/t Au for 645koz with numerous high-grade targets in the surrounding area. Operations are planned to restart in the future.

Mt Clement: is located 30 km from the Paulsens Gold Operation and is currently one of the largest and highest-grade antimony deposit in Australia. Significant upside potential for growth of the antimony Resource exists with the Company actively exploring the region.

COMPETENT PERSON'S STATEMENT

The information in this announcement that relates to geology, exploration results and planning was compiled by Mr. David Potter, who is a member of the AusIMM, and is an employee and a security holder of the Company. Mr. Potter has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr. Potter consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

The Company confirms that it is not aware of any new information or data that materially affects the information in the original reports, and that the form and context in which the Competent Person's findings are presented have not been materially modified from the original reports.

Where the Company refers to the exploration results, Mineral Resources, and Reserves in this report (referencing previous releases made to the ASX), it confirms that it is not aware of any new information or data that materially affects the information included in that announcement and all material assumptions and technical parameters underpinning the Mineral Resource and Reserve estimates with that announcement continue to apply and have not materially changed.

The Company confirms that all material assumptions underpinning the production targets, or the forecast information derived from the production targets, included in the original ASX announcements dated, 8 May 2024, 9 May 2024 and 15 May 2024 continue to apply and have not materially changed.

³ BC8 ASX announcement 20/05/24

New High-Grade Gold Zones within Fingals Open Pit - Kal East

APPENDIX A - JORC 2012 GOLD RESOURCE TABLE - BLACK CAT (100% OWNED)

Mining Depletion within the Resource of 36kt @ 8.3g/t Au for 10koz for Paulsens and 378kt @ 3.0g/t Au for 36koz for Bulong open pit has not been taken into account in the above table.

Notes on Resources:

- The preceding statements of Mineral Resources conforms to the 'Australasian Code for Reporting of Exploration Results Mineral Resources and Ore Reserves (JORC Code) 2012 Edition'.
- All tonnages reported are dry metric tonnes.
- Data is rounded to thousands of tonnes and thousands of ounces gold. Discrepancies in totals may occur due to rounding.
- Resources have been reported as both open pit and underground with varying cut-offs based off several factors discussed in the corresponding Table 1 which can be found with the original ASX announcements for each Resource.
- Resources are reported inclusive of any Reserves.
- Paulsens Inferred Resource includes Mt Clement Eastern Zone Au of 7koz @ 0.3g/t Au accounting for lower grades reported.

The announcements containing the Table 1 Checklists of Assessment and Reporting Criteria relating for the 2012 JORC compliant Resources are:

Kal East Gold Operation

- Boundary, Trump, Myhree – Black Cat ASX announcement on 9 October 2020 "Strong Resource Growth Continues including 53% Increase at Fingals Fortune"
- Strathfield – Black Cat ASX announcement on 31 March 2020 "Bulong Resource Jumps by 21% to 294,000 oz"
- Majestic – Black Cat ASX announcement on 25 January 2022 "Majestic Resource Growth and Works Approval Granted"
- Sovereign, Imperial – Black Cat ASX announcement on 11 March 2021 "1 Million Oz in Resource & New Gold Targets"
- Jones Find – Black Cat ASX announcement 04 March 2022 "Resource Growth Continues at Jones Find"
- Crown – Black Cat ASX announcement on 02 September 2021 "Maiden Resources Grow Kal East to 1.2Moz"
- Fingals Fortune – Black Cat ASX announcement on 23 November 2021 "Upgraded Resource Delivers More Gold at Fingals Fortune"
- Fingals East – Black Cat ASX announcement on 31 May 2021 "Strong Resource Growth Continues at Fingals".
- Trojan – Black Cat ASX announcement on 7 October 2020 "Black Cat Acquisition adds 115,000oz to the Fingals Gold Project".
- Queen Margaret, Melbourne United – Black Cat ASX announcement on 18 February 2019 "Robust Maiden Mineral Resource Estimate at Bulong"
- Anomaly 38 – Black Cat ASX announcement on 31 March 2020 "Bulong Resource Jumps by 21% to 294,000 oz"
- Wombola Dam – Black Cat ASX announcement on 28 May 2020 "Significant Increase in Resources - Strategic Transaction with Silver Lake"
- Hammer and Tap, Rowe's Find – Black Cat ASX announcement on 10 July 2020 "JORC 2004 Resources Converted to JORC 2012 Resources"

New High-Grade Gold Zones within Fingals Open Pit - Kal East

Coyote Gold Operation

- Coyote OP&UG – Black Cat ASX announcement on 16 January 2022 “Coyote Underground Resource increases to 356koz @ 14.6g/t Au – One of the highest-grade deposits in Australia”
- Sandpiper OP&UG, Kookaburra OP, Pebbles OP, Stockpiles, SP (Coyote) – Black Cat ASX announcement on 25 May 2022 “Coyote & Paulsens High-Grade JORC Resources Confirmed”

Paulsens Gold Operation

- Paulsens UG – Black Cat ASX announcement on 31 October 2023 “24% Resource Increase, Paulsens Underground - 406koz @ 9.5g/t Au”
- Paulsens SP – Black Cat ASX announcement on 19 April 2022 “Funded Acquisition of Coyote & Paulsens Gold Operations - Supporting Documents”
- Belvedere UG – Black Cat ASX announcement on 21 November 2023 “Enhanced Restart Plan for Paulsens”
- Mt Clement – Black Cat ASX announcement on 24 November 2022 “High-Grade Au-Cu-Sb-Ag-Pb Resource at Paulsens”
- Merlin, Electric Dingo – Black Cat ASX announcement on 25 May 2022 “Coyote & Paulsens High-Grade JORC Resources Confirmed”

APPENDIX B - JORC 2012 POLYMETALLIC RESOURCES - BLACK CAT (100% OWNED)

Deposit	Resource Category	Tonnes ('000)	Grade					Contained Metal				
			Au (g/t)	Cu (%)	Sb (%)	Ag (g/t)	Pb (%)	Au (koz)	Cu (kt)	Sb (kt)	Ag (koz)	Pb (kt)
Western	Inferred	415	-	0.4	0.2	76.9	-	*	1.6	0.7	1,026	-
	Total	415	-	0.4	0.2	76.9	-	*	1.6	0.7	1,026	-
Central	Inferred	532	-	-	-	-	-	*	-	-	-	-
	Total	532	-	-	-	-	-	*	-	-	-	-

	Total	794	-	-	1.7	17.0	2.4	*	-	13.2	434	18.7
TOTAL		1,741	-	-	-	-	-	*	1.6	13.9	1,460	18.7

Notes on Resources:

1. The preceding statements of Mineral Resources conforms to the ‘Australasian Code for Reporting of Exploration Results Mineral Resources and Ore Reserves (JORC Code) 2012 Edition’.
2. All tonnages reported are dry metric tonnes.
3. Data is rounded to thousands of tonnes and thousands of ounces/tonnes for copper, antimony, silver, and lead. Discrepancies in totals may occur due to rounding.
4. Resources have been reported as both open pit and underground with varying cut-offs based off several factors discussed in the corresponding Table 1 which can be found with the original ASX announcements for each Resource.
5. Resources are reported inclusive of any Reserves.
6. Gold is reported in the previous table for Mt Clement, and so is not reported here. A total of 66koz of gold is contained within the Mt Clement Resource.

The announcements containing the Table 1 Checklists of Assessment and Reporting Criteria relating for the 2012 JORC compliant Reserves are:

Paulsens Gold Operation

- Mt Clement – Black Cat ASX announcement on 24 November 2022 “High-Grade Au-Cu-Sb-Ag-Pb Resource at Paulsens”

APPENDIX C - JORC 2012 GOLD RESERVE TABLE - BLACK CAT (100% OWNED)

Mining Centre	Proven Reserve			Probable Reserve			Total Reserve		
	Tonnes ('000)	Grade (g/t Au)	Metal ('000 oz)	Tonnes ('000)	Grade (g/t Au)	Metal ('000 oz)	Tonnes ('000)	Grade (g/t Au)	Metal ('000 oz)
Kal East Gold Operation

Paulsens Gold Operation									
Underground	93	4.5	14	537	4.3	74	631	4.3	87
Paulsens Reserve	93	4.5	14	537	4.3	74	631	4.3	87
TOTAL RESERVES	93	4.5	14	4,262	2.3	317	4,356	2.4	330

Mining Depletion within the Reserve of 43kt @ 4.1g/t Au for 6koz for Paulsens and 429kt @ 2.0g/t Au for 28koz for Kal East open pit has not been taken into account in the above table.

Notes on Reserve:

1. The preceding statements of Mineral Reserves conforms to the ‘Australasian Code for Reporting of Exploration Results Mineral Resources and Ore Reserves (JORC Code) 2012 Edition’.
2. All tonnages reported are dry metric tonnes.
3. Data is rounded to thousands of tonnes and thousands of ounces gold. Discrepancies in totals may occur due to rounding.
4. Cut-off Grade:
 - Open Pit - The Ore Reserves are based upon an internal cut-off grade greater than or equal to the break-even cut-off grade.
 - Underground - The Ore Reserves are based upon an internal cut-off grade greater than the break-even cut-off grade.
5. The commodity price used for the Revenue calculations for Kal East was AUD \$2,300 per ounce.
6. The commodity price used for the Revenue calculations for Paulsens was AUD \$2,500 per ounce.
7. The Ore Reserves are based upon a State Royalty of 2.5% and a refining charge of 0.2%.

The announcements containing the Table 1 Checklists of Assessment and Reporting Criteria relating for the 2012 JORC compliant Reserves are:

Kal East Gold Operation

- Black Cat ASX announcement on 03 June 2022 “Robust Base Case Production Plan of 302koz for Kal East”

Paulsens Gold Operation

- Black Cat ASX announcement on 10 July 2023 “Robust Restart Plan for Paulsens”

New High-Grade Gold Zones within Fingals Open Pit - Kal East

APPENDIX D - KAL EAST DRILLING - JORC TABLE 1

Section 1: Sampling Techniques and Data		
Criteria	JORC Code Explanation	Commentary
Sampling techniques	<i>Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i>	RC Drill samples were collected on 1m intervals directly from the cone splitter on the drill rig. Samples average ~3kg. No composite samples were collected. Face samples were conducted: <ol style="list-style-type: none">1. by marking up geological contacts/features on the face.2. collected by chipping along the sample line using a geological hammer into a "bucket containing a numbered calico bag.3. between the marked sample intervals with no interval larger than 1m or smaller than 0.3m.
	<i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i>	RC samples were collected using a face-sampling drill bit and are considered representative of the 1m interval drilled. Face samples were collected based on geological contacts and features with a nominal weight of ~3kg per sample.
	<i>Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1m samples from which 3kg was pulverised to produce a 30g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information.</i>	All samples were submitted to the laboratory and were sorted and dried upon receipt. Samples were crushed to 3mm chips, pulverised and homogenized by the laboratory. Au was analysed by fire assay using a 40g charge.
Drilling techniques	<i>Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</i>	Drilling referenced in this announcement was via RC methods using a face-sampling bit.
Drill sample recovery	<i>Method of recording and assessing core and chip sample recoveries and results assessed.</i>	Chip sample recovery was visually estimated on the rig by the geologist. Face sampling does not have a recovery component.
	<i>Measures taken to maximise sample recovery and ensure representative nature of the samples.</i>	Drill sample recovery was estimated on the rig and sample recovery was maximised by drilling dry as much as practicable. Where sample loss occurred, it was recorded by the geologist. Face sampling does not have a recovery component.
	<i>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</i>	No known relationship between sample recovery and grade has been identified
Logging	<i>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</i>	Sample lithologies were recorded during collection by the geologist. RC chips and faces were logged and/or mapped for lithology, alteration, structure and mineralisation on lithologic boundary intervals. All RC drilling was geologically logged.
	<i>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</i>	Logging is qualitative. Visual estimates are made of sulphide, quartz vein and alteration percentages. Development faces are routinely sampled, logged and photographed.
	<i>The total length and percentage of the relevant intersections logged.</i>	All RC drilling and faces was geologically logged.
Sub-sampling techniques and sample preparation	<i>If core, whether cut or sawn and whether quarter, half or all core taken.</i>	No drill core is referenced in this release.
	<i>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</i>	1m RC sampling was done off the drill rig using a cone splitter. No composite samples were collected.
	<i>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</i>	Some samples contained moisture but not to a degree that influenced sampling methodology Sample preparation is conducted at a commercial laboratory to an acceptable standard. Blanks were submitted to the laboratory on a 1:100 blank to sample ratio to test for sample preparation contamination. Data was reviewed during the QAQC analysis.
	<i>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</i>	Commercial standards were assayed at a ratio of 4 standards per 100 samples with standards submitted on a regular interval – standards are inserted with sample IDs ending in 20, 40, 60 and 80. Standards were selected based on expected assay grades and matrix-matched for geology where possible.

New High-Grade Gold Zones within Fingals Open Pit - Kal East

Section 1: Sampling Techniques and Data		
Criteria	JORC Code Explanation	Commentary
Quality of assay data and laboratory tests	<i>Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second half sampling.</i>	Field duplicates were collected from RC drilling during 1m interval sampling off the cone splitter at an interval of 4 duplicates per 100 samples collected – duplicate samples were collected with sample IDs ending in 00, 25, 50 and 75. Duplicates are periodically taken from the mineralised zones of the ore drive faces in the same manner as the original samples. Results from the duplicates are compared back to the original to compare possible grade and sample variability. Duplicate grades are in line originals.
	<i>Whether sample sizes are appropriate to the grain size of the material being sampled.</i>	Sample sizes are considered appropriate and representative of the 1m drilling and face intervals.
	<i>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</i>	Gold was analysed via fire assay using a 40g charge
	<i>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</i>	No other sources of data reported.
Verification of sampling and assaying	<i>Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established.</i>	The QAQC protocols used include the following for all samples: Commercially prepared certified reference materials are inserted at an incidence of 4 in 100 samples, where sample IDs end in 20, 40, 60 and 80 such that CRMs are submitted on a regular and unbiased interval. The CRM used is not identifiable to the laboratory. The primary laboratory QAQC protocols used include the following for all drill samples: Repeat of pulps at a rate of 5%. Screen tests (percentage of pulverised sample passing a 75µm mesh) are undertaken on 1 in 100 samples. Both the accuracy component (CRM's and umpire checks) and the precision component (duplicates and repeats) are deemed acceptable for the stage of exploration. Duplicate samples, collected directly off the cone splitter on the rig, are submitted to the laboratory at an incidence of 4 in 100 samples, where sample IDs end in 00, 25, 50 and 75 such that no sampling bias is introduced. Duplicate assay results are compared with the primary sample to assess grade variability, but the primary sample result is only used for reporting. All reported assay results have passed QAQC protocols.
	<i>The verification of significant intersections by either independent or alternative company personnel.</i>	Significant intercepts have been reviewed by the Competent Person as part of the due diligence process.
	<i>The use of twinned holes.</i>	No twinned holes were drilled.
	<i>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</i>	Logging was completed in Excel with drop down fields and imported into a cloud based Acquire database. Internal data validation routines (e.g. no overlapping segments, all primary data fields populated) are built into the logging software and validated during export to the Acquire database.
Location of data points	<i>Discuss any adjustment to assay data.</i>	No adjustments to assay data have been made.
	<i>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</i>	Drill collar locations were surveyed using a differential GPS with an accuracy of +/-0.1m prior to use in Resource models. Downhole surveys are conducted using a commercial north-seeking gyro operated by the drilling contractors. Downhole depths are recorded by the drill contractor and samples are collected on 1m intervals for all drilling with the supervising geologist cross-checking hole depths by counting bags. Where no sample is collected, an empty bag is placed on the ground in sequence Face sample locations were measured by laser from survey control locations and checked against final ore drive surveys.
	<i>Specification of the grid system used.</i>	All surface samples and drilling in this announcement are reported in MGA94, Zone 51 coordinate system.
	<i>Quality and adequacy of topographic control.</i>	A lidar topographic survey was conducted with a resolution of +/-0.5m was collected in 2023 across the entirety of the Kal East tenement package and is used for topographic control.
Data spacing and distribution	<i>Data spacing for reporting of Exploration Results.</i>	Drill spacing was on an 8m x 8m pattern. Faces are nominally 3.5m apart.
	<i>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</i>	No unpublished Resource is referenced in this announcement
	<i>Whether sample compositing has been applied.</i>	No field compositing is reported in this report. All samples collected were on 1m intervals directly off the RC rig cone splitter.

New High-Grade Gold Zones within Fingals Open Pit - Kal East

Section 1: Sampling Techniques and Data		
Criteria	JORC Code Explanation	Commentary
Orientation of data in relation to geological structure	<i>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</i>	Sample results >1m interval are composited using a 0.5g/t Au cut-off allowing for a maximum of 2m internal dilution.
	<i>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</i>	Where possible, drilling was conducted perpendicular to controlling structures.
		Where possible, drilling was conducted perpendicular to controlling structures, so bias is expected to be minimal.
Sample security	<i>The measures taken to ensure sample security.</i>	All samples are bagged in tied pre-numbered calico bags direct off the RC rig cyclone. Samples are collected by the supervising geologist and submitted directly to the commercial laboratory in Kalgoorlie on a daily basis. Samples are transported by the supervising geologist in a light vehicle. Sample pulp splits are returned to BC8 via return freight and stored in shelved containers on site. Pre BC8 operator sample security assumed to be similar and adequate.
Audits or reviews	<i>The results of any audits or reviews of sampling techniques and data.</i>	No external reviews have been conducted

Section 2: Reporting of Exploration Results		
Criteria	JORC Code Explanation	Commentary
Mineral tenement and land tenure status	<i>Type, reference name/number, location and ownership including agreements or material issues with third parties such as Joint Ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</i>	All tenements are held in good standing by Black Cat (Kal East) Pty Ltd, a wholly owned subsidiary of Black Cat Syndicate.
	<i>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</i>	No known impediment to obtaining a licence to operate exists and the remainder of the tenements are in good standing. The Majestic and Fingals deposits are covered by granted mining leases
Exploration done by other parties	<i>Acknowledgment and appraisal of exploration by other parties.</i>	Extensive exploration and development have been conducted across the Kal East Project including Majestic Fingals Fortune was discovered by Geopeko in 1983/84 through a systematic soil sampling program, followed up by costeaning, RAB and RC drilling. Geopeko withdrew from the joint venture with Mistral Mines in 1986, and Mistral Mines completed a feasibility study at Fingals Fortune in 1990. The project was acquired by Ramsgate Resources in 1991, and the Mt Monger Gold Project JV was established with General Gold. The Fingals Fortune deposit was mined in 1992-1993 and near-mine exploration was ongoing. Black Cat acquired the project in 2020 and exploration activities since then are documented in Black Cat ASX releases. At Majestic, prior to Integra, Imperial/Majestic was variably drilled by a number of companies including Newcrest. The bulk of work completed at Imperial/Majestic was completed by Integra and Silver Lake prior to Black Cat taking ownership.
Geology	<i>Deposit type, geological setting and style of mineralisation.</i>	The project is located in the Kurnalpi Terrane of the Archaean Yilgarn Craton. Project-scale geology consists of granite-greenstone lithologies metamorphosed to greenschist facies. Mineralisation is predominantly narrow-vein orogenic Au style with mineralisation hosted in veins ranging from several cm to 2m wide within and adjacent to locally important fault zones.
Drill hole information	<i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i> <ul style="list-style-type: none"><i>easting and northing of the drill hole collar;</i><i>elevation or Reduced Level ("RL") (elevation above sea level in metres) of the drill hole collar;</i><i>dip and azimuth of the hole;</i><i>down hole length and interception depth;</i><i>hole length; and</i><i>if the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i>	Drill details are tabulated elsewhere in this announcement.

New High-Grade Gold Zones within Fingals Open Pit - Kal East

Section 2: Reporting of Exploration Results		
Criteria	JORC Code Explanation	Commentary
Data aggregation methods	<i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g., cutting of high-grades) and cut-off grades are usually Material and should be stated.</i>	All aggregated zones are length weighted and calculated with a 1g/t Au cut-off with a maximum of 1m internal dilution. No top-cuts have been applied.
	<i>Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i>	All intersections are calculated using a 1g/t Au lower cut-off with a maximum of 1m internal dilution, except where indicated elsewhere in the report.
	<i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i>	No metal equivalents are referenced in this release.
Relationship between mineralisation widths and intercept lengths	<i>These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g. 'down hole length, true width not known').</i>	Drilling is designed approximately perpendicular to the controlling structures where practicable. Where this is not the case, reference is made to estimated true widths and shown on appropriate diagrams.
Diagrams	<i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i>	Appropriate diagrams have been included in the body of the announcement.
Balanced reporting	<i>Where comprehensive reporting of all Exploration Results are not practicable, representative reporting of both low and high-grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</i>	All significant results have been tabulated in this release, including drillholes with no significant results.
Other substantive exploration data	<i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i>	Geophysical surveys, including aeromagnetic surveys, have been conducted by other parties to highlight and interpret prospective structures.
Further work	<i>The nature and scale of planned further work (e.g., tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i>	Further grade control and resource development drilling will be conducted in and around the Fingals Pit area. Underground development at Majestic continues with a drill program due to start in the March quarter 2026.
