

MONS PROJECT, WA

Release Date 26 November 2025

## MONS PROJECT, WA

# CSIRO Kick-Start program funding for Gallium Exploration Regolith Research

Nimy Resources (ASX:NIM) is pleased to announce that it has entered into an agreement with Australia's national science agency CSIRO, supported by their Kick-Start program, to commence the Regolith Research study. This study aims to develop a geomorphic model to enhance the confidence in gallium exploration within the Mons Project in Western Australia.

### Aims of the CSIRO Kick-Start program

1. The regolith research will focus on the Block 3 Gallium Resource
2. The research will utilise cutting edge machine learning and scientific expertise
3. The findings from the project will be utilised in improving the understanding of in-situ and transported regolith at Mons and how gallium and associated pathfinders move through these environments.

### Nimy Managing Director Luke Hampson said:

*"We are pleased to commence further collaborating with CSIRO, Australia's national science agency.*

*The focus of the project will be on the Block 3 Gallium Prospect, building upon the recently developed CSIRO LandScape+® Model, to develop a more refined geomorphic province model.*

*This is an important collaboration for Nimy, our exploration findings from the studies will assist in targeting on both an individual deposit and regional scale, focusing on additional high-grade gallium resource tonnes".*

## CSIRO KICK-START PROGRAM & REGOLITH RESEARCH

Nimy Resources Limited (ASX:NIM) and the Commonwealth Scientific and Industrial Research Organisation (CSIRO) have entered into an agreement supported by CSIRO's Kick-Start Program. This agreement will enable access to the research expertise held by CSIRO to extend investigations into the prospectivity of the Mons Project, thereby enhancing the understanding of the regolith types.

The primary objectives of the project are to develop a geomorphic model over the Block 3 Gallium Prospect, incorporating drill data and integrating it with the previously developed machine-learned landscape type model. Additionally, the project aims to develop a regolith atlas.

Nimy's recent discovery of a new greenstone sequence, the Mons Project, spanning ~3,004 km<sup>2</sup> north of the Forrestania Greenstone Belt, represents a significant advancement in critical mineral and base metal exploration in Western Australia. This Kick-Start project seeks to improve the geological understanding of Nimy's prospects by applying machine learning, regolith mapping, surface geochemistry, drilling geochemistry, and scientific expertise to identify how gallium and associated pathfinders move through these environments and to develop a supported regolith atlas. This atlas will be instrumental in refining exploration targeting models.

Receiving matched funding from the Kick-Start program will be crucial for the project's success, significantly enhancing its feasibility and outcomes. The project aims to advance the regolith understanding within one of Australia's newest greenstone belts in the Yilgarn Craton, a region with substantial untapped potential.

These results will be integrated into a larger research and development collaboration with other government, university, and specialist consultant groups. In this collaboration, CSIRO's contribution will provide essential geological insights that drive future discoveries. By combining advanced techniques with established methods, this project is poised to enhance exploration efficiency, paving the way for new discoveries of critical resources such as gallium, nickel, copper, cobalt, silver, gold and rare earth elements (REE), and driving further advancements in the field.

CSIRO's Kick-Start Program is an initiative designed to support innovative Australian start-ups and businesses. It provides matched funding support and access to CSIRO's research expertise and capabilities, facilitating business growth and development. Nimy has been approved for \$50,000 Kick-Start funding support.

## Forward Looking Statement

This report contains forward looking statements concerning the projects owned by Nimy Resources Limited. Statements concerning mining reserves and resources may also be deemed to be forward looking statements in that they involve estimates based on specific assumptions. Forward looking statements are not statements of historical fact and actual events, and results may differ materially from those described in the forward-looking statements as a result of a variety of risks, uncertainties and other factors.

Forward looking statements are based on management's beliefs, opinions and estimates as of the dates the forward looking statements are made and no obligation is assumed to update forward looking statements if these beliefs, opinions and estimates should change or to reflect other future developments.

## About Nimy Resources and the Mons Project

Nimy Resources is a Western Australian exploration company that has prioritised the development of its recently discovered Mons Belt, situated 370km northeast of Perth and 140km north-northwest of Southern Cross, a Tier 1 jurisdiction in Western Australia.

The Mons Belt represents a district scale discovery, spanning ~80km x 30km over 17 tenements with a north/south strike of some 80km of mafic and ultramafic sequences covering ~3004km<sup>2</sup> north of the Forrestania greenstone belt.

The Mons Belt provides a new and exciting frontier in critical metal and gold exploration in Western Australia, the company is currently working with the CSIRO to advance the lithology and mineralisation types within one of Australia's newest greenstone belt discoveries in the Yilgarn Craton, a region with significant untapped potential.

Nimy Resources believes the Mons Belt offers multi commodity potential with the initial discovery of Masson (Cu, Ni, Co, Au & PGE's) in addition to Block 3 East Prospect with high-grade gallium (Ga) discovered in the northern tenements.

In addition to these discoveries, the southern tenements have significant fertile komatiite sequences like those found in the Kambalda region of WA.

Nimy Resources is always mindful of its shareholders and the need to continue efforts in creating shareholder value through a methodical and science-based approach.
