ASX ANNOUNCEMENT

OPERATIONAL UPDATE – DRILLING PROGRAM SUCCESSFULLY COMPLETED AT MIANDETTA

HIGHLIGHTS:

- Parabellum has returned to the field completing an air core drilling program at Miandetta
- The program reached completion ahead of time and on budget
- Assay results will be delivered to the labs in Orange, NSW with results expected before the end of CY2025
- Labs will be carrying out multi-element testing, specifically for Scandium (Sc) and Cobalt (Co) amongst other key critical minerals that are hosted by nearby deposits
- Drilling tested internal continuity and potential extensions to the existing Ni-Co mineralisation where an Exploration Target ¹ was previously defined

Parabellum Resources Limited (ASX:PBL) ('**Parabellum**', or 'the **Company**'), provides an update to shareholders on its activities at the Redlands Project ('**Redlands**') located in New South Wales ('**NSW**').

Parabellum is pleased to announce the completion of a planned drilling program at the Company's Miandetta target, part of the Redlands Project (Figure 1).

Drilling included approximately 26 shallow Air Core and RC percussion holes that tested:

- Nickel mineralisation continuity in previously drilled areas; and
- Extensions to known mineralisation in untested areas.

Twenty Six (26) holes were drilled for a total of 953m with an average hole depth of ~37m. Five holes were re-drilled with RC hammer as the original aircore holes were less than 10m in depth. The program completed safely without incident (Figure 2).

The Company engaged the services of Chief Exploration Drilling that carried out the drilling program.

Subject to the results of this program, the Company plans to convert the current Exploration Target to a JORC-compliant mineral resource estimate.

¹ ASX Announcement 24 June 2024. See also Table 1

Cautionary Statement: The potential tonnage, grade and quantity of the Exploration Target is conceptual in nature. There has been insufficient exploration to estimate a Mineral Resource for the target area reported. It is uncertain if further exploration will result in the estimation of a Mineral Resource.
